the neuroendocrine control of reproduction and development of invertebrates has a long tradition as an important area of research in france the reader of this volume is certainly familiar with the significant contributions to this field made by such outstanding scientific personalities as jean jacques bounhiol jean panouse bernard possompes pierre and line joly helene charniaux cotton maurice duchon manfred gabe guy echalier marie raabe and others it is therefore not surprising that the centre national de la recherche scientifique cnrs sponsored in 1975 and 1983 two major international meetings devoted to this subject the organizers of the 1975 meeting which was held in lille decided to concentrate on the biosynthesis metabolism and mode of action of the invertebrate hormones to some extent professors duchon and joly wanted to convey the message that they felt that the period of classical invertebrate endocrinology had come to an end and that traditional approaches were being replaced by biochemical analyses how right they were is illustrated by the present volume today biochemistry molecular biology and analytical chemistry are tools of the invertebrate endocrinologist who now starts his morning work by homogenizing his worm mollusc insect and by extracting dna steroids or peptides
